EXAMINER

SELLERS, DANIEL R

ART UNIT

PAPER NUMBER

2614

MAIL DATE

DELIVERY MODE

02/02/2011

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/829,581	Applicant(s) BEN-YAACOV ET AL.	
	Examiner DANIEL R. SELLERS	Art Unit 2614	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 22 November 2010.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,4-9,13,16 and 17 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,4-9,13,16 and 17 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 18 May 2009 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1, 4-9, 13, 16, and 17 have been considered but are moot in view of the new ground(s) of rejection.

Drawings

2. The drawings were received on 5/18/09. These drawings are acceptable.

Claim Rejections - 35 USC § 103

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

4. **Claims 1, 4-6, 13, 16 and 17** are rejected under 35 U.S.C. 103(a) as being unpatentable over Grady (previously cited), US 2004/0058649 A1, in view of Fadell et al., US 2004/0224638 A1 (previously cited and hereinafter Fadell) with evidence from Csicsatka, US 2003/0158737 A1 (previously cited), further in view of Thielen (previously cited), US 2004/0117442 A1, and further in view of Ohmura et al., US 7,158,842 B2 (previously cited and hereinafter Ohmura).

5. Regarding **claim 1**, Grady teaches a hand-held music player for use in conjunction with radios, comprising:

a casing (see ¶ 0073 and figure 18, show an iPod™ (hereinafter IPOD), which has a casing) ;

Art Unit: 261415

a mini-jack socket on said casing to play music into a headphone (see ¶ 0073 and figure 18, unit 259 in view of Thielen);

a first transfer socket on said casing, through which an analog song is transferred to an external radio transmitter, the external radio transmitter being an FM or an RF transmitter (see ¶ 0039-0040, 0064 and figure 12, unit 226)...;

a second transfer socket on said casing, distinct from the mini-jack socket and the first transfer socket, (see ¶ 0073 and figure 18, unit 259)

Grady teaches a modular FM transmitter for transmitting the audio playback of an IPOD, or similar device (see abstract and ¶ 0009-0012). However, Grady does not teach:

a first transfer socket distinct from the mini-jack socket..., and the external radio transmitter comprising a radio data system (RDS) transmitter and

a second transfer socket... "through which digital song and meta-data for the song are received from a digital music library, and through which the meta-data for the song is transferred to the radio transmitter for transmission by the radio transmitter as RDS data, wherein the meta-data comprises a name and an identifier for the hand-held music player"

Fadell teaches methods for a portable media device to communicate with other devices (see abstract). Specifically, Fadell teaches the IPOD as an exemplary embodiment of the portable media device (see ¶ 0043). Fadell similarly teaches a mini-jack socket to play music into a headphone (see ¶ 0055 and figure 1, unit 116). Fadell, also, teaches a second socket on said casing, distinct from the mini-jack socket, through which a digital song and meta-data is transferred (see ¶ 0055-0057, 0060-0062, figure 1, unit 118, and figure 2, unit 158A). Specifically, Fadell teaches that there may be one or more data ports on the hand-held music player by design (see ¶ 0057), and the data connection between the hand-held music player and a media device many different connections (e.g. digital or analog audio) in different connectors (e.g. USB or

FIREWIRE) (see ¶ 0062 and figure 2). Fadell further teaches that the media device may be a docking station with various connections (see ¶ 0074, 0076, 0081, and figure 2, unit 154, figure 5, unit 214, figure 6C, and figure 7C, units 268 and 270). Fadell teaches a multitude of design choices, and illustrates that a docking station can expand a connector on hand-held music player (see figure 2, unit 158A) to a first transfer socket, distinct from the mini-jack, through which an analog song can be transferred (see figure 7C, unit 270). can be transferred (see ¶ 0055). It would have been obvious for one of ordinary skill in the art at the time of the invention to combine the teachings of Grady and Fadell for the purpose of transferring songs from a computer to a digital audio player for portability. Csicsatka, US 2003/0158737 A1, is evidence of a portable digital audio player with a separate headphone and a line-out socket (i.e. a mini-jack socket distinct from the first socket) (see abstract, ¶ 0050, and figure 1, units 17 and 41). However, the combination does not teach or make obvious:

...“and the external radio transmitter comprising a radio data system (RDS) transmitter”...

...“through which the meta-data for the song is transferred to the radio transmitter for transmission by the radio transmitter as RDS data, wherein the meta-data comprises a name and an identifier for the hand-held music player”

“circuitry to process the digital song and meta-data received by said second transfer socket from the digital music library, to generate the analog song transferred by said first transfer socket to the radio transmitter, to generate the meta-data transferred by said second transfer socket to the radio transmitter, and to generate the music played by said mini-jack socket into the headphone.”

Thielen teaches a hand-held music player for use in conjunction with radios, which is capable of sending metadata to the radio transmitter to be

transmitted to the radio (see ¶ 0049-0050 and 0129). Thielen teaches a second socket on said casing through which digital audio data is received (see ¶ 0015). Ideally, Thielen teaches an all-in-one solution (see figures 3 and 10, unit 20), wherein the text (i.e. meta-data) is transmitted by the FM transmitter using RDS (see ¶ 0129). However, Thielen also teaches a modular solution, like that taught by Grady (see Thielen, ¶ 0213 and 0217-0220). It would have been obvious for one of ordinary skill in the art at the time of the invention to use circuitry (see Thielen, ¶ 0128-0129, 0213, and 0217-0220) to convert the received digital audio to analog to transmit it to the radio via frequency modulation and to convert the received digital meta-data to RDS data for the purpose of displaying pertinent data, such as the artist and song title to car passengers (see Fadell, ¶ 0055, figure 1, unit 118 and figure 6C). Therefore, it would have been obvious for one of ordinary skill in the art at the time of the invention to combine the teachings of Grady, Fadell, and Thielen with evidence from Csicsatka for the purpose of better display of meta-data. However, the combination still does not appear to teach or make obvious:

..."through which the meta-data for the song is transferred to the radio transmitter for transmission by the radio transmitter as RDS data, wherein the meta-data comprises a name and an identifier for the hand-held music player"

Ohmura teaches a system of portable apparatuses and an audio system in communication, wherein a name and an identifier is transmitted (see Ohmura, column 11, lines 29-49 and column 12, lines 28-42). One of ordinary skill

in the art at the time of the invention would have found it an obvious variant to send a name of the device to differentiate "external player A" from "external player B" along with the identifier that must be sent for the computer system to identify the source and recipient of data. It would have been obvious for one of ordinary skill in the art at the time of the invention to combine the teachings of Grady, Carey, Thielen, and Ohmura with evidence from Csicsatka for the purpose of supporting several portable audio players on one audio system (see Ohmura, column 3, lines 16-48).

6. Regarding **claim 4**, see the preceding argument with respect to claim 1. The combination teaches the hand-held music player of claim 1, further comprising an LED display to display the meta-data transferred by said second transfer socket to the radio transmitter (see Grady, ¶ 0075-0076 and figure 19 and Fadell, ¶ 0047, wherein the display is backlit by an LED).

7. Regarding **claim 5**, see the preceding argument with respect to claim 1. The combination teaches the hand-held music player of claim 1, further comprising an LCD display to display the meta-data transferred by said second transfer socket to the radio transmitter (see Fadell, ¶ 0047 and/or Thielen, ¶ 0117 and 0139).

8. Regarding **claim 6**, see the preceding argument with respect to claim 1. The combination teaches the hand-held music player of claim 1, wherein the second transfer socket comprises a USB socket (see Grady, ¶ 0073).

9. Regarding **claim 13**, see the preceding argument with respect to claim 1.

The combination teaches the hand-held music player of claim 1, wherein the meta-data transferred by the second transfer socket to the radio transmitter includes the name of the analog song being transmitted by the first transfer socket to the radio transmitter. Thielen teaches associated text information and it is obvious that this includes a name of the song currently being transmitted.

10. Regarding **claim 16**, see the preceding argument with respect to claim 1.

The combination teaches the hand-held music player of claim 1, further comprising a frequency selector, for selecting a broadcast frequency for transmission by the radio transmitter (see Thielen, ¶ 0128).

11. Regarding **claim 17**, see the preceding argument with respect to claim

16. The combination teaches the hand-held music player of claim 16, wherein said frequency selector comprises a tuner for scanning radio frequencies (see Thielen, ¶ 0133).

12. **Claims 7 and 8** are rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of Grady, Fadell, Thielen, and Ohmura with evidence from Csicsatka with additional evidence as applied to claim 6 above, and further in view of Official Notice of well-known prior art (admitted as prior art because applicant had not traversed the original rejection on 6/27/2008, see MPEP 2144.03 C).

13. Regarding **claim 7**, see the preceding argument with respect to claim 6. The combination teaches the hand-held music player of claim 6. However the combination does not specify if the USB socket is a USB 1.1 socket.

The Office takes Official Notice, wherein it is well-known in the prior art at the time of the invention by one of ordinary skill in the art that USB 1.1 and 2.0 could be implemented. It would have been obvious for one of ordinary skill in the art at the time of the invention to combine the teachings of Grady, Fadell, Thielen, Ohmura, and well-known prior art with evidence from Csicsatka for the purpose of supporting low-speed USB 1.1 devices to ensure compatibility. Likewise it would be obvious to support the high-speed USB 2.0 interface to ensure the fastest transfer rates of digital data when possible.

14. Regarding **claim 8**, see the preceding argument with respect to claims 6 and 7. The combination teaches the hand-held music player of claim 6, wherein said USB socket is a USB 2.0 socket.

15. **Claim 9** is rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of Grady, Fadell, Thielen, and Ohmura with evidence from Csicsatka as applied to claim 6 above, and further in view of Matsuda et al., US 6,774,604 B2 (previously cited and hereinafter Matsuda).

16. Regarding **claim 9**, see the preceding argument with respect to claim 6. The combination of Grady, Fadell, Thielen, and Ohmura with evidence from

Csicsatka teaches the features of claim 6. However, the combination does not teach a USB on-the-go (OTG) socket.

Matsuda teaches a USB OTG socket for charging a digital device from another portable device or charging the portable device from the digital device (column 9, lines 1-60). It would have been obvious for one of ordinary skill in the art at the time of the invention to combine the teachings of Grady, Fadell, Thielen, Ohmura, and Matsuda with evidence from Csicsatka for the purpose of charging the digital player from another portable device.

Conclusion

17. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Juntunen et al., US 6,163,711 A (previously cited) - teaches an FM/RDS transmitter system (abstract);

James, US 6,671,494 B1 (previously cited) - teaches an add-on FM transmitter (abstract);

Saubade, US 2004/0049559 A1 (previously cited) - teaches a DARC encoder to provide text in a sideband (abstract and ¶ 0042);

Strietelmeier, Julie, "Gadgeteer Hands On Review: Apple iPod (3rd Generation 30GB Model)", 06/06/2003 (previously cited) - teaches about the

iPod (pp. 1-10) and evidence that a line out is helpful for driving speakers (see p. 5, end of third paragraph);

Staff, "Griffin Technology Ships New iTrip for 3rd Generation iPods", 10/08/2003 (previously cited) - teaches about an FM add-on to the iPod (pp. 1-2);

David Carey, "Apple's iPod packs a pricey punch" (previously cited and hereinafter Carey), is evidence to teach a dial on the IPOD casing (see p. 1, ¶ 4, second sentence and p. 3, top left of figure, which teaches a navigation scroll wheel, or dial, assembly); and

Mankovitz, US 5,161,251 A (previously cited), teaches sending audio from a compact disc and associated metadata to a FM transmitter (see abstract and figures 1 and 9).

1. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory

action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DANIEL R. SELLERS whose telephone number is (571)272-7528. The examiner can normally be reached on Monday to Friday, 9am to 5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vivian C. Chin can be reached on (571)272-7848. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
